# Use Case

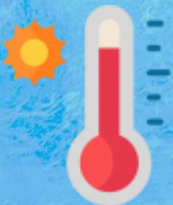

The automating Light ON and OFF sensor is a excellent automating network device to make changes and know the working condition of the light from where we are.

The networking wireless technology based on IOT provides us the best remedies to automate our fans form the place we are outside/inside the home through our mobile phone.

The water monitoring automated technology helps us to detect the moisture level of the soil and water the plants to the level needed, even in our absence by controlling through the Wireless phone.

Television can be controlled from anywhere, Without the remote Wireless technology based on IoT provides us with the best solutions to control your television

The whether monitoring system helps in monitoring the humidity and temperature in our room by the wireless technology IOT to keep our smart home to be in comfortable temperature.

The door monitoring system helps in providing the update status of the door to be open/close by our smart home through the wireless technology Home automation.

# Understanding the needs of the Customer and creating reliable products to serve them all.

We are an embedded and IoT based engineering solution providers. We are in hype since 2017 providing our best knowledge and cutting edge technology for our clients. We have done major works on embedded systems, networking, application development, IoT and Machine Learning. We provide you with user friendly products as well as customized solutions. We focus on our qualities, thus spreading a joyous customer relationship.
